

PhoneView

Product Manual

PhoneView is a Mac application which allows you to store files on your iPhone or iPod Touch. It also provides access to the iPhone or iPod Touch iTunes media, photos, notes, SMS messages, contacts, call history, web bookmarks and history.

Note: The iPhone operating system does *not* provide a way to view files stored using PhoneView. PhoneView's disk mode is intended for file storage and access via a Mac.

System Requirements:

- iPhone or iPod Touch running iPhone OS 2.0 or later
- Mac OS X 10.4.11 or later
- iTunes v8.1 or later

Getting Started

Installing PhoneView:

After unzipping the downloaded file, drag the PhoneView program to your Applications folder. If you previously installed the PhoneView Demo, be sure to drag that to the trash icon in your dock. If you previously used an older version of iPhoneDrive, MegaPhone or PhoneView, then you should drag that to the trash.

Uninstalling PhoneView:

To uninstall, drag the PhoneView application to the trash can icon in your dock. You may also choose to trash the PhoneView folder in Library/Application Support.

Connecting your iPhone or iPod Touch:

Connect your iPhone or iPod Touch to your Mac using its USB cable. We recommend connecting it directly to the Mac, as using a USB hub or keyboard USB connection may result in slower performance.

iTunes will launch automatically when the iPhone or iPod Touch is attached. You can safely close or ignore it.

Launching PhoneView:

After downloading PhoneView, double-click the program's icon to start it. You will see the PhoneView file browser window and toolbar.

Rebooting of the Device:

The following PhoneView features require a reboot of the iPhone or iPod Touch:

- Deleting Call Log items.
- Deleting SMS items.

During the process of applying changes to Call Log, and SMS information stored on the device (using the "Apply Changes" button), you will see a message on the iPhone screen stating "Restore in progress" and then "Restore complete". The iPhone will then reboot.

IMPORTANT: Rebooting will interrupt anything you are doing on the device including making a phone call, playing music, or syncing with iTunes.

Disk Mode

To view and copy files, choose "Disk" from the left-hand sidebar.

Copying Files From Your Computer to Your iPhone:

There are two ways to transfer your files and folders to the iPhone:

Method 1:

Click the "Copy To iPhone" button on the toolbar. You will see a file chooser showing the files on your computer. Select one or more files or folders and click the "Select" button. The selected files will be copied into the currently selected folder on the iPhone.

Method 2:

Drag files and folders directly from the Desktop or a Finder window into the PhoneView browser.

Copying Files From Your iPhone to Your Computer:

There are three ways to transfer your files and folders from the iPhone.

Method 1:

Highlight the files or folders to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the files and click the "Save" button. The selected files will be copied into the selected folder on your Mac.

Method 2:

Drag a file or folder directly from the PhoneView browser into a Finder window or onto the Desktop.

Method 3:

Simply double-click a file to download it to your Documents folder. Certain files such as pictures and movies will open automatically after being transferred to your Mac. A double-clicked application will be copied to a temporary location and launched.

Other Options:

New Folder:

You can create folders on the iPhone to organize your data. To create a new folder, click the "New Folder" button on the toolbar. You will be prompted to name the folder. Enter a name and click "OK".

Delete:

To remove files or folders from the iPhone, select the items to be removed and click the Delete button on the toolbar.

Rename:

To rename files or folders on the iPhone, select the item to be renamed and choose Rename from the File menu.

Contacts Mode

To access the iPhone or iPod Touch contact list, choose Contacts from the left-hand sidebar.

Contacts mode shows all contacts stored on the iPhone or iPod Touch, as well as the associated image, phone numbers and email addresses.

Copying Contacts From the iPhone or iPod Touch to Your Computer:**Method 1:**

Double-click one or more items. The contacts will be saved to your Documents folder as a V-Card file.

Method 2:

Highlight the contacts to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the contacts and click the "Save" button. The selected contacts will be saved into the folder as a V-Card file.

Method 3:

Drag contacts directly from the PhoneView browser into a Finder window or onto the Desktop. The selected contacts will be saved into the selected folder as a V-Card file.

Method 4:

Highlight the contacts to be copied. Click the "Send To Address Book" button on the toolbar. The selected contacts will be transferred directly to your Mac's Address Book.

Notes Mode

To access notes stored on the iPhone or iPod Touch, choose Notes from the left-hand sidebar.

Copying Notes From the iPhone to Your Computer:**Method 1:**

Highlight the notes to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the notes and click the "Save" button. The selected notes will be copied into the selected folder on your Mac.

Method 2:

Drag notes directly from the PhoneView browser into a Finder window or onto the Desktop.

Method 3:

Highlight a note and click the "Send to Mail" button in the PhoneView toolbar. A new outgoing email message containing the note will be created in Apple Mail.

Copying Notes From Your Computer to Your iPhone:

You can use PhoneView to add new Notes. The new notes will be visible in the iPhone's Notes application.

Method 1:

Select Notes on the sidebar. Click the "Copy To iPhone" button on the toolbar. You will see a file chooser showing the files on your computer. Select one or more files of the types listed below and click the "Select" button.

PhoneView will accept the following file types for conversion to an iPhone Note:

- Text File (.txt)
- Rich Text File (.rtf, .rtfd)
- Word File (.doc, .docx)
- PDF File (.pdf)
- HTML File (.html, .htm)
- Email Message File (.eml)
- Text Clipping (.textclipping)

PDF files will be converted to styled text. (No images will be included.)

Method 2:

Select Notes on the sidebar. Drag one or more files of the type listed above directly from the Desktop or a Finder window into the PhoneView notes list. You can also drag text selections from other programs.

Method 3:

Select Notes on the sidebar. Click the "New Note" button on the toolbar to type a new note. See Editing Notes (below) for more information on using the Notes editing window.

Once you have finished making changes, click the "Apply Changes" button located at the bottom of the PhoneView window.

Editing Notes:

Select Notes on the sidebar. Double-click a note or click the "Edit Note" button on the toolbar. When in the editing screen, you can access the Fonts and Colors palettes from the PhoneView Edit menu. You can also edit the Note's title. Once you have finished making changes, click the "Apply Changes" button located at the bottom of the PhoneView window.

Deleting Notes:

Select Notes on the sidebar. Select one or more notes and click the "Delete" button on the toolbar. Once you have finished making changes, click the "Apply Changes" button located at the bottom of the PhoneView window.

Call Log Mode

To access the iPhone call history, choose Call Log from the left-hand sidebar.

The iPhone stores information about your most recent phone calls. PhoneView will save your call history each time the iPhone is connected and PhoneView is opened. Call Log mode shows all call log information currently stored on the iPhone, along with duration information. If the corresponding phone numbers are present in your iPhone or Mac Address Book, the caller names will also be displayed.

Copying Call Log Items From the iPhone to Your Computer:

Method 1:

Double-click one or more items. The info will automatically be copied to your Documents folder and opened in your default

text editor as a tab delimited list.

Method 2:

Highlight the call log items to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the call data and click the "Save" button. The selected info will be copied into the selected folder on your Mac as a text file.

Method 3:

Drag call log items directly from the PhoneView browser into a Finder window or onto the Desktop.

Deleting Call Log Items:

Select Call Log on the sidebar. Select one or more Call Log items and click the "Delete" button on the toolbar. Once you have finished making changes, click the "Apply Changes" button located at the bottom of the PhoneView window. Applying changes to the iPhone or iPod will reboot the device. Please see the above section "Rebooting of the Device" for more information.

Call Log Archive Access:

Call log data is backed up each time an iPhone is connected to PhoneView. To access the archived data, click the "Archives" button in the PhoneView toolbar.

SMS Mode

To access the iPhone SMS history, choose SMS from the left-hand sidebar.

PhoneView will save your SMS conversations each time the iPhone is connected and PhoneView is opened. SMS mode shows all SMS conversations currently stored on the iPhone. If corresponding phone numbers, images and AIM information is present in your iPhone or Mac Address Book, the appropriate names and photos will be displayed.

Copying SMS Information From the iPhone to Your Computer:

Method 1:

Double-click one or more items. The info will automatically be copied to your Documents folder and opened in your default text editor.

Method 2:

Highlight the SMS items to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the SMS messages and click the "Save" button. The selected info will be copied into the selected folder on your Mac as a text file.

Method 3:

Drag SMS items directly from the PhoneView browser into a Finder window or onto the Desktop.

Deleting SMS Items:

Select SMS on the sidebar. Select one or more SMS items and click the "Delete" button on the toolbar. Once you have finished making changes, click the "Apply Changes" button located at the bottom of the PhoneView window. Applying changes to the iPhone or iPod will reboot the device. Please see the above section "Rebooting of the Device" for more information.

Web Mode

To access your device's bookmarks and web history, choose Web from the left-hand sidebar.

Copying Bookmark and History Information From the iPhone to Your Computer:

Method 1:

Double-click one or more items. The selected web sites will open in your default web browser.

Method 2:

Highlight the web sites to be downloaded. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the items and click the "Save" button. The selected items will be copied into the selected folder on your Mac as .webloc files.

Method 3:

Drag items directly from the PhoneView browser into a Finder window or onto the Desktop. The selected items will be copied into the selected folder on your Mac as .webloc files.

Method 4:

To import the items as bookmarks, drag items directly from the PhoneView browser into your web browser's bookmark organizer window.

Media (Music) Mode

To access music and videos stored on the iPhone or iPod Touch, choose one of the media categories (Music, TV Shows, Videos, Audiobooks, Podcasts or Ringtones) from the left-hand sidebar.

Copying Music from the iPhone to Your Computer:

Method 1:

Highlight the items to be copied. Click the "Send to iTunes" button on the toolbar. The selected items will be copied and sent directly to iTunes.

Method 2:

Highlight the items to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the files and click the "Save" button. The selected media will be copied into the selected folder on your Mac.

Method 3:

Drag media items directly from the PhoneView browser into a Finder window or onto the Desktop.

Playing Music in PhoneView:

Method 1:

Double-click a song in PhoneView to play it. Note that digital-rights-managed (DRM) songs may not play via PhoneView.

Method 2:

Select a song and then click the play button at the bottom of the PhoneView window.

Photos Mode

To access iPhone camera photos and synced photos stored on the iPhone, choose Photos from the left-hand sidebar.

Copying Photos from the iPhone to Your Computer:

Method 1:

Highlight the photos to be copied. Click the "Send to iPhoto" button on the toolbar. The selected photos will be copied and sent directly to iPhoto.

Method 2:

Highlight the photos to be copied. Click the "Copy From iPhone" button on the toolbar. You will see a file chooser showing a location on your computer. Select a destination location for the photos and click the "Save" button.

Method 3:

Drag photos directly from the PhoneView browser into a Finder window or onto the Desktop.

Method 4:

Simply double-click a photo to download it to your Pictures folder. The photo will automatically open in Preview.

Removing Camera Photos from the iPhone:

Highlight the photos to be deleted. Click the Delete button in the PhoneView toolbar. The selected photos will be permanently deleted from the iPhone. Deletion only works for the "Camera Roll" (or the "Saved Photos" section for iPod Touch users.)

PhoneView Preferences

To access PhoneView settings, choose "Preferences..." from the PhoneView menu.

Launch PhoneView when an iPhone is Attached: Select this option if you would like PhoneView to be launched automatically whenever an iPhone or iPod Touch device is connected to your Mac.

Show Entire Disk (Advanced Disk Mode): Normal Mode provides access only to a specific PhoneView folder (called iPhoneDrive) in the iPhone's media storage area. Select the Advanced Mode option to access the entire Media folder section in Disk mode. This is useful for direct access to the camera photo directory, as well as access to media used by other native iPhone apps. On jailbroken devices, this checkbox will provide access to the root file system.

SMS Export Format: SMS messages can be exported in three formats. Text format will export selected SMS messages in a simple text format readable in a program such as Word or TextEdit. Tab Delimited format is ideal for import into a spreadsheet or database program such as Excel and Keynote. XML format will export an XML document.
